

R.A.C.E. Product Suite

R.A.C.E. brings industrial solutions to a new level.

R.A.C.E. Industrial Touch Screen (RITS)

R.A.C.E. Industrial Touch Screen

The RITS, R.A.C.E. Industrial Touch Screen, is a proven product with over 80 in use in the New Zealand Meat and Fish industry. The rugged design means it can be used in those environments where water and dust are problems, but not for the RITS. Loaded with features like 15" or 17" resistive touch LCD, choice of processors and memory, stainless steel case, choice of mountings and multiple interface options, including serial, USB, and wireless networking, make this a versatile, user friendly and reliable unit. We are also happy to make to order if you have any special requirements.

Features:

- 600MHz, or 1GHz Processor, Industrial single processing board
- 512MB SDRAM
- 160GB 7200rpm HD (on Vibration Proof mount)
- 100MB network
- 15" or 17" Resistive touch screen
- 4x Serial Ports, 2x USB Ports, 1x Parallel Port
- Internal Heat Exchanger
- Windows XP Pro
- Stainless Enclosure with Touch screen polycarbonate protector
- Cabled or Wireless Network Adaptor

R.A.C.E. Printer Cabinet

R.A.C.E. Printer Cabinet

We also supply stainless steel cabinets to protect your label printers. These are sealed with closed cell foam and can be fitted with internal heaters for added moisture protection. These are ideal for processing requirements where cleanliness is a priority.

Features:

- IP65 rated seal when front door closed
- Designed to suit your printer make and model
- Stainless steel construction
- Sliding shelf with heavy duty runners for easy printer access
- Two 16mm cable glands for cable entry

R.A.C.E. Software Products

R.A.C.E. Mob Entry / Stock Procurement

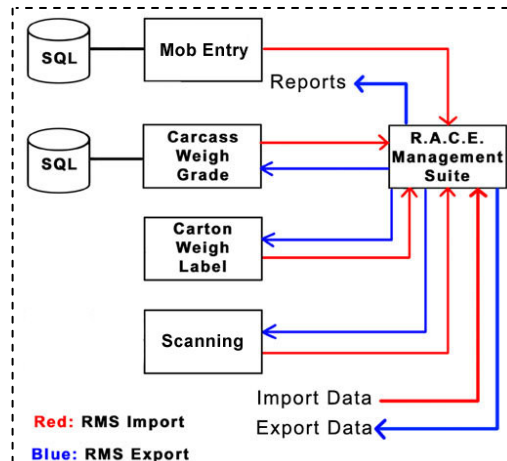

The R.A.C.E. Mob Entry module provides a point of data entry for stock received and due to be slaughtered. Stock can be of any user defined type.

The Mob Entry module complements the RACE Weigh Grade product, with real-time mob data available to Weigh Grade stations using this Mob Entry module. Entry of data is easy, simple and fast. Much consideration has been given to the 'Slaughter men' and to the nature of their job, hence the importance for ease of use and the minimal amount of inputting required on their behalf.

R.A.C.E. Carcass Weigh Grade

The R.A.C.E. Carcass Weigh Grade System provides carcass grading for beef, sheep, goats, pigs, deer or any user defined carcass type. The system is designed for total user configurability, there are 42 multi-function hot-keys available for the selection of sexes, grades, muscling, defects (diseases), dressing faults, destinations and comments - all of which are user configurable.

The Carcass Weigh Grade system works with the R.A.C.E. Mob Entry and R.A.C.E. Management Suite (RMS) products. All grading data can be viewed and edited via the RMS, configurations are also administered from the RMS. Data is exposed using an MSDE database, or alternatively, XML or CSV data export files can be produced.

Software Operation Role

R.A.C.E. Carton Weigh Label

The R.A.C.E. Carton Weigh Label System provides weight capture, product selection, label printing, order entry, carton verification and has 480 configurable hot keys on 12 pages to suit every product requirement, with each page colour coded and user labelled for easy identification.

For customer orders, the Order Entry section is provided for specific customer product requirements. This allows for multiple products and orders of either carton number or weight specifications, with warnings when near completion or each product line and the entire order.

The R.A.C.E. Carton Weigh Label System can be stand-alone for single users or networked for multiple station requirements. Remote management is also provided to edit, manipulate and report on production.

R.A.C.E. Scanning System

Make your product handling easy with the R.A.C.E. Scanning and Inventory Management System. You can control palletisation and product identification from the scanners, and our system can scan your products to 3 levels of locations (store, row, bay), storing the information in the SQL database for reporting and audit control. Orders are automatically presented to the scanners for order picking, allowing remote management of the process, with automatic criteria control of each order. We use only top quality hardware to protect your investment and prove excellent reliability and ruggedness.
